## Guidelines

Ciencia y Mar (CyM) is a quarterly publication by the Universidad del Mar. Publish previously unpublished works about Natural Sciences, Social Sciences, and Humanities, focused on the sea and Coastal Zone.

Follow carefully these instructions before submission. Authors may submit their manuscripts in one of three formats:

Main paper: Study of six months or more. Maximum 30 pages. The manuscript should include: Resumen and Palabras clave (in Spanish), Abstract, Key words, Introduction, Methods, Results, Discussion, Acknowledgments and References.

Brief paper: Study less than six months. Maximum 15 pages. It should include the above-mentioned sections.

Note: Observations and increases of geographic or ecological ranges. Maximum length of seven pages. Notes do not have headers, except Resumen, Abstract, Acknowledgments and References.

CyM has three additional sections: Divulgation, Scientific and Technological Information and book reviews.

### General guidelines

The manuscripts must have a cover sheet containing the manuscript title, the chosen format, and the full name, address, and email of all authors. The names should only be mentioned on the cover. The text should be written in Spanish or English, should be double spaced and in one column, with Arial font 11 or 12 points. The pages will have 3 cm in all margins and be numbered in the bottom right.

The manuscript title and headers can be in bold, subtitles must be in normal text. Only scientific names and words of Greco-Latin origin (e.g., *et al.*, *sensu lato*) should be written in italics. Indices, subscripts, formulas, etc. should be in normal text. Never should underlining.

Decimals should be indicated by a period, while thousands and millions should be written with a comma (1,200,352.02). When not followed by units (33 km), or representing a range (2-3), integers from zero to ten should be written out completely in letters. The abbreviations must be explained the first time they are used. Only metric units are allowed (mm, cm, m, km, l, g, kg, s, min, hr, d).

The title should be brief and concise, using lower case, except the first word, names of taxa, or authors. Preferably it will not exceed 20 words and/or 120 characters.

The abstract should indicate the objective of the study, a summary of the methodology used, the most relevant results, and the conclusions that were reached. The summary must not exceed 300 words. The Resumen and Résumé are the Spanish and French version of the abstract. May include 5-7 key words.

In the introduction is recommended to contextualize the work with the work's background, in chronological order and starting from the general to the particular. Work objectives should explicitly be stated. In Materials and Methods should present succinct information, so that the work can be reproducible. When appropriate, this section should include a brief but complete description of the study area.

The Results should be included in a logical order and in relation to the methodology employed. The description of the results may be completed with tables and/or figures.

To the Discussions is recommended that begin with a summary of the main results, should be concise, without expounding too much on speculation or extrapolation of results. If necessary, a subtitle of Conclusions can be included.

### Tables, figures and cites

Tables should be as simple as possible and avoid being too extensive. To identify

tables, Roman numerals in uppercase should be used. In the table header must be provided the symbology used.

Group related drawings and photographs and avoiding isolated figures. The symbology of units and the scale should be within the figure, not in a footnote. Arabic numerals must be used for all figures.

The headings of tables and footnotes of figures must be grouped progressively on a separate sheet located at the end of the manuscript. Tables and figures should be submitted on separate sheets of the manuscript. Black and white or grayscale figures should be submitted in TIFF, while color figures must be in BMP, GIF or JPEG.

For works referenced in the text use the author's last name, followed by the year (no comma between them). When more than one author is cited, they should be written in the same space but separated by a comma, making sure that the authors are arranged chronologically (Hartman 1952, Carlton 1987). When the work cited has three or more authors, include the last name of first author followed by *et al.* and the year (Knight-Jones *et al.* 1979). Only works cited in the text should appear in the Reference section and vice versa.

### References

Must be alphabetically ordered, with the respective order:

#### Journal papers

Becerril-Morales, F. 2001. Algunos aspectos sobre ecología y conservación en el estero La Ventanilla, Oaxaca, México. Ciencia y Mar 5(15): 37-45.
